

DECEMBER 31, 2025

**Investment Strategy**

The Payden Core Bond Fund invests in a diversified mix of bonds across a wide spectrum of sectors and maturities. It utilizes the entire range of maturities from cash instruments to 30-year bonds, investing in sectors, such as, sovereign bonds, corporates, mortgage-backed securities and asset-backed securities. There is some use of below investment-grade bonds for their added yield and diversification. The Fund has a moderate degree of expected price volatility given its longer-duration profile.

**Fund Highlights**

- » Bond selection is driven by extensive credit research.
- » Diversified portfolio holdings.
- » Investments allocated across the 1-year to 30-year maturity spectrum.

## Role In Portfolio

Intermediate-Term Bond – Appropriate as a core fixed-income holding for investors seeking exposure to a diversified bond portfolio.

## Investment Manager

Payden & Rygel is one of the largest privately-owned global investment firms. Founded in Los Angeles in 1983, we have served the needs of institutional and individual investors for over 40 years. We offer a wide array of investment strategies and vehicles, including fixed-income, equity, and balanced portfolios, which can be accessed through separately managed accounts as well as comingled funds. We are committed to providing investment solutions focused on each client's specific needs and objectives.

**Headquarters:** Los Angeles

**Founded:** 1983

**Assets Under Management:** \$167 billion  
(as of 12/31/25)

## FOOTNOTES

<sup>A</sup> Returns less than one year are not annualized. <sup>B</sup> The minimum initial investment may be modified for certain financial intermediaries that submit trades on behalf of underlying investors. Payden Funds' distributor may lower or waive the minimum initial investment for certain categories of investors at their discretion. <sup>C</sup> Effective duration is a measure of the Fund's price sensitivity to changes in interest rates. <sup>D</sup> The 30-day SEC yield represents the dividends and interest earned for a 30-day period, annualized, and divided by the net asset values per share at the end of the period. The SEC yield is computed under a standardized formula which assumes all portfolio securities are held to maturity. This value may differ from the actual distribution rate of the fund. <sup>E</sup> Total Annual Fund Operating Expenses include all direct operating expenses of the Fund and a Rule 12b-1 Distribution Fee of 0.25%. <sup>F</sup> Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest) and are subject to change. Security ratings are assigned using the highest rating of Moody's, S&P, and Fitch.

For more information and to obtain a prospectus or summary prospectus, visit [payden.com](http://payden.com) or call 800 572-9336. Before investing, investors should carefully read and consider investment objectives, risks, charges, expenses and other important information about the Fund, which is contained in these documents. **Interest Rate Risk:** As with most funds that invest in debt securities, the income on and value of your shares in the Fund will fluctuate along with interest rates. When interest rates rise, the market prices of the debt securities the Fund owns usually decline. When interest rates fall, the prices of these securities usually increase. Investment in foreign securities entails certain risks from investing in domestic securities, including changes in exchange rates, political changes, differences in reporting standards, and, for emerging-market securities, higher volatility. Investing in high-yield securities entails certain risks from investing in investment-grade securities, including higher volatility, greater credit risk, and the issues' more speculative nature. The Payden Funds are distributed through Payden & Rygel Distributors, member FINRA.

## Market

- » December closed the year with global fixed-income markets supported by easing central bank policy and growing confidence that peak policy rates are behind us. Softer growth data and continued disinflation weighed against resilient labor markets and persistent inflation in the services sector, keeping policymakers cautious. Overall, bond markets delivered solid returns for the year, with focus now turning to the pace of economic growth and the timing and scale of further policy easing.
- » In the U.S., markets were dominated by Federal Reserve (Fed) policy deliberations and delayed economic data due to the prolonged government shutdown. In December, the Fed delivered its third 25 basis point (bp) cut of the year to bring the federal funds rate to 3.50%-3.75%, but the decision was notably split, with three officials dissenting over the move as inflation remained above target and labor conditions weakened. On the data front, the release of backlog indicators following the government shutdown showed softer consumer confidence and moderating job openings, while nonfarm payrolls and weekly jobless claims continued to point to a labor market that is cooling but not deteriorating sharply. The S&P 500 ended the month down 0.05%; meanwhile, the yield on the 10-year U.S. Treasury ended the month at 4.17%.

## Outlook

- » Our outlook for 2026 can be characterized as cautiously optimistic, though risks are skewed to the downside. The U.S. economy remains central to our global outlook, particularly given the unusual divergence between strong GDP growth and a weakening labor market, an imbalance we do not expect to persist in 2026. In our view, the U.S. economy faces a binary path: either re-accelerating as technology-driven productivity gains take hold or slipping into recession if labor market softness begins to weigh more broadly on economic activity.
- » We expect U.S. inflation is expected to continue moderating, which, combined with labor market weakness, should allow the Fed to continue easing policy toward neutral, and potentially beyond. Outside the U.S., most developed economies are likely to remain resilient, supported by benign economic growth, declining inflation, and accommodating, or further easing, monetary policy.
- » We prefer to distribute risk in our portfolios in a more balanced manner across duration and credit. Consistent with our central outlook, we continue to hold modest overweight positions in higher-quality credit sectors, including investment-grade corporates and select high-quality securitized assets.
