Investment Strategy

The Payden Emerging Markets Corporate Bond Fund invests in a diversified portfolio of emerging-market corporate bonds. The Fund invests in companies that are identified through extensive global industry and company analysis, consistent with our sovereign views. The Fund maintains geographic diversification across Latin America, Europe, and Asia. Most of our investments are U.S. dollar-denominated, but we also see attractive opportunities in select local markets.

Fund Highlights

- » Emerging-market corporate focus - opportunistic exposure to sovereigns and quasi-sovereigns.
- » Managed by Payden & Rygel with over 25 years of experience managing emerging-market portfolios.
- » Corporate market expertise - dedicated credit analysts.
- » Pure bond strategy - limited use of credit default swaps or distressed debt.

Quoted performance data represent past performance, which does not guarantee future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. For the most recent month-end performance, which may be higher or lower than that quoted, visit our website at payden.com or call 800 572-9336.

Role In Portfolio

Appropriate for investors with long investment time horizons who seek diversification via corporate bonds issued by emerging-market countries.

Investment Manager

Payden & Rygel is one of the largest privately-owned global investment firms. Founded in Los Angeles in 1983, we have served the needs of institutional and individual investors for over 40 years. We offer a wide array of investment strategies and vehicles, including fixed-income, equity, and balanced portfolios, which can be accessed through separately managed accounts as well as comingled funds. We are committed to providing investment solutions focused on each client's specific needs and objectives.

Headquarters: Los Angeles

Founded: 1983

Assets Under Management: \$167 billion

Market

» Emerging-markets (EM) debt indices finished a strong year on a positive note, extending gains in December. Yields in hard-currency sovereign and corporate credit narrowed by 0.16% and 0.14%, respectively, relative to similar-maturity U.S. Treasuries. Hard-currency sovereigns maintained their outperformance versus corporates, with high-yield-rated issuers continuing to lead the way. Local markets also closed out 2025 with strong performance, as currencies strengthened against the U.S. dollar and interest rates moved modestly lower.

Outlook

» Overall, EM country fundamentals are sound. EM sovereign credit ratings have been on a net upward path for more than two years, a trend that we believe can continue in 2026. EM growth is resilient, inflation is contained, and external accounts are in a healthy position. Over the past year, most EM central banks have been easing monetary policy, although they have been prudent, keeping a gap between policy rates and inflation.

» EM countries vary in their exposure to new U.S. trade barriers, and to date, the economic fallout has been manageable. For EM economies, the combination of lower energy prices, prevalent China exports, and currency appreciation against a weaker U.S. dollar may prove disinflationary. Financial conditions have loosened for EM countries due to strong equity returns and falling interest rates, helping to balance downside growth risks. Assuming global growth remains resilient, easing cycles across many central banks may reach a natural conclusion in 2026.

» Looking ahead, two structural forces work to the benefit of EM debt investors: 1) stronger long-term growth prospects relative to developed markets, and 2) a wide range of investment opportunities across roughly 90 countries, including sovereign, corporate, and local market bonds, spanning all relevant geographies and sectors. In our view, EM debt offers investors useful diversification benefits, while yields are attractive for generating income over time.

FOOTNOTES

^A Returns less than one year are not annualized. ^B The minimum initial investment may be modified for certain financial intermediaries that submit trades on behalf of underlying investors. Payden Funds' distributor may lower or waive the minimum initial investment for certain categories of investors at their discretion. ^C Effective duration is a measure of the Fund's price sensitivity to changes in interest rates. ^D The 30-day SEC yield represents the dividends and interest earned for a 30-day period, annualized, and divided by the net asset values per share at the end of the period. The SEC yield is computed under a standardized formula which assumes all portfolio securities are held to maturity. This value may differ from the actual distribution rate of the fund. ^E Represents a 30-day SEC yield without adjusting for fee waivers or expense reimbursements. ^F Payden & Rygel has contractually agreed to limit Total Annual Fund Operating Expenses After Fee Waiver or Expense Reimbursement to 0.95%. This agreement has a one-year term ending February 28, 2026. Please note that the 0.95% expense level does not include Acquired Fund Fees and Expenses, interest, taxes, and extraordinary expenses. ^G Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest) and are subject to change. Security ratings are assigned using the highest rating of Moody's, S&P, and Fitch.

For more information and to obtain a prospectus or summary prospectus, visit payden.com or call 800 572-9336. Before investing, investors should carefully read and consider investment objectives, risks, charges, expenses and other important information about the Fund, which is contained in these documents. Interest Rate Risk: As with most funds that invest in debt securities, the income on and value of your shares in the Fund will fluctuate along with interest rates. When interest rates rise, the market prices of the debt securities the Fund owns usually decline. When interest rates fall, the prices of these securities usually increase. Investment in foreign securities entails certain risks from investing in domestic securities, including changes in exchange rates, political changes, differences in reporting standards, and, for emerging-market securities, higher volatility. Investing in high-yield securities entails certain risks from investing in investment-grade securities, including higher volatility, greater credit risk, and the issues' more speculative nature. The Payden Funds are distributed through Payden & Rygel Distributors, member FINRA.
